

Enterprise Tool Hawk™

Having a well designed barcode tool and equipment tracking system can mean immediate savings to your organization. Our Enterprise Tool Hawk™ system brings these benefits beyond your four walls out to where the work is performed with a complete web based solution

Are you purchasing items that you know you have because you cannot find them? Do you have an organized and reliable way to make employees accountable for the equipment they are issued? The answers to the above questions are, in most cases, surprising. Our Enterprise Tool Hawk™ is designed to answer these problems. Tools & equipment are tagged with a durable barcode ID tag provided by Data Support, Inc. and scanned out to users, making them accountable. Adding the speed and accuracy of barcodes makes the Enterprise Tool Hawk™ easy to use. At any time, management can get a quick snapshot of tool & equipment deployment by site or user.

Web Based Barcode Tracking

By hosting your own internet tracking solution, you make the system available to any authorized user with access to the internet. There is no longer need to purchase, install and maintain software on all workstations. All you need is your corporate server running IIS, the Enterprise Tool Hawk™ software and you are ready to go. Add new equipment, check equipment out to users, move equipment to new locations, run reports and more all from any computer with internet access. Enterprise Tool Hawk™ also works well in a corporate intranet.

Manage Critical Dates

Vital to the goal of reducing the cost of tool & equipment inventory is managing critical dates for each. Knowing when an item is scheduled to be serviced or calibrated can prevent repair or replacement costs. Inspecting equipment prior to warranty expiration dates can pass repair costs on to the manufacturer.

Reduce Cost

What does it cost your organization to not be able to start a job on time because all the tools or equipment are not available?

Host your own internet barcode tracking system

About Data Support, Inc.

Data Support, Inc., founded in 1987, brings over 20 years experience in developing tracking solutions for industry and government. We have grown by providing affordable and easy to use solutions that begin saving time and money immediately. We have served very large companies such as the New York Stock Exchange and large government agencies such as The City of New York. Many of our best solutions, however, have been for medium and small companies and agencies.
