

Grant Tracking System™

The need to use grant obtained funds to finance local programs brings with it the responsibility to keep accurate track of inventory purchased. The Enterprise Grant Tracking™ system combines the speed and accuracy of barcodes with a powerful, secure, web based tracking application.

Web Based Barcode Tracking

By hosting your own secure internet grant tracking solution, you make the system easily available to any authorized user. Add new equipment, check equipment out to users, move equipment to new locations, run reports and more all from any computer with secure internet access.

Accountability

The Enterprise Grant Tracking™ system includes the ability to assign assets to agencies, departments and individual users. Assets are checked out, checked in and moved by scanning a barcode and performing a simple transaction in the system. By using the structure of the Enterprise Grant Tracking™ system, any agency can accurately demonstrate what was purchased with the grant funds, where they are and who has them.

Reports and Exports

The Enterprise Grant Tracking™ system includes many useful management reports that can also be accessed at any internet workstation. These include reports sorted by item, location, user, current state, quantity, service due and transaction history. Excel exports of sorted look-ups is standard.

Physical Count Capability

Periodically there is a need to perform an accurate count of current inventory. This could be required in an audit. The count is loaded on to portable terminals with integrated scanners. The physical count is scanned and uploaded to the system. This automated functionality will save time and labor to complete any physical count.

Portable Solution

The Enterprise Grant Tracking™ system includes a powerful component that runs on a mobile portable terminal. Perform all transactions on a rugged portable terminal. Communicate with the system wirelessly or upload periodically at a workstation.

Manage Assets purchased with Grant Funding using a powerful barcode tracking system

About Data Support, Inc.

Data Support, Inc., founded in 1987, brings over 20 years experience in developing tracking solutions for industry and government. We have grown by providing affordable and easy to use solutions that begin saving time and money immediately. We have served very large companies such as the New York Stock Exchange and large government agencies such as The City of New York. Many of our best solutions, however, have been for medium and small companies and agencies.
