

**FIRE BUG**

## Firebug Route Manager™

### Firebug Route Manager™

Fire and safety equipment inspection system utilizes a powerful, web based software system, portable terminals and barcodes to perform scheduled inspections

### Firebug Route Manager™

Directs the technician through the where each fire & safety item is located. The technician will be informed that he/she missed items before the inspection is complete.

### Firebug Route Manager™

Is a web based application that can be hosted on your network. The system is scalable from a single PC up to a multi-site enterprise level operation.

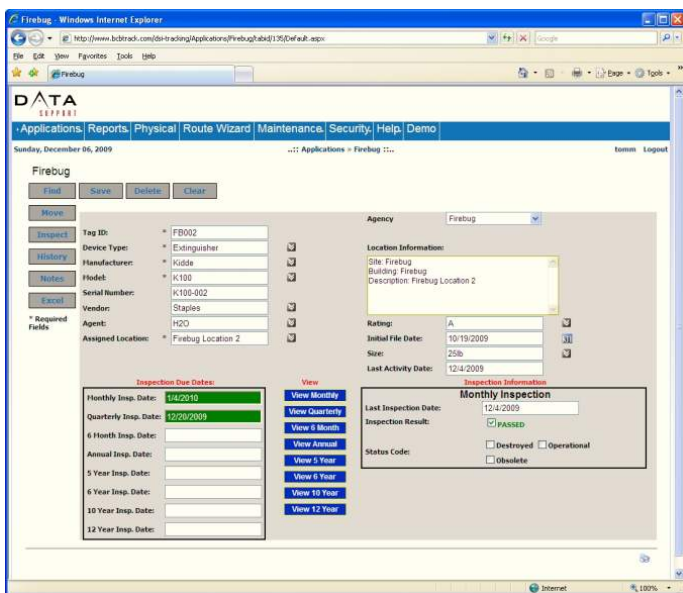

### Firebug Route Manager™

Includes all the reporting needed to demonstrate compliance with regulatory agencies. Reports can be printed, saved as a PDF or exported to Excel.

## Firebug Route Manager™ Features:

- Directed or roam routes available
- Add new extinguishers with mobile device
- Add new locations with mobile device
- "Replace" function to swap out bad extinguishers
- Web based system works over local area network, wide area network or a single PC
- Multiple security levels and permissions based on log in
- Full item history available
- Inspect extinguishers, safety doors, exit signs, safety lights and more from the same system
